Introduction

- SmartTour: An Intelligent Tourist Places Guide is a centralized platform designed to help travellers discover and explore tourist destinations conveniently.
- The system allows users to search for tourist places and access important information such as historical background, cultural significance, geographical details and images. It also provides map-based location information, nearby attraction recommendations and a favourites feature.
- The project follows the principles of Adaptive Software Engineering, focusing on modularity, flexibility, maintainability and the ability to accommodate future enhancements.

Problem Statement

- Travellers often collect information from multiple websites and applications, making the process time-consuming and inconvenient.
- **Problems:**
- Information is scattered across different platforms
- Repeated searching is required
- Destination information is difficult to organize
- Nearby attractions may be overlooked
- No unified place to save favourite destinations
- **SmartTour aims to provide this information through one platform.**

Objectives

- Develop a centralized tourist information platform
- Enable destination search
- Display detailed tourist-place information
- Integrate map/location services
- Recommend nearby attractions
- Allow users to save favourite places
- Provide destination images
- Provide a simple and user-friendly experience

Existing System

Current Approach:

Users depend on multiple websites, search engines, travel applications and map services to plan their visits.

Limitations:

Time-consuming information gathering

Information distributed across platforms

Repeated searches

Difficult comparison and organization

Limited personalization

Proposed System

SmartTour

A unified platform that brings important tourist information together.

Search → Explore → Locate → Discover → Save

Benefits:

Centralized information

Easy destination discovery

Interactive location support

Nearby attraction suggestions

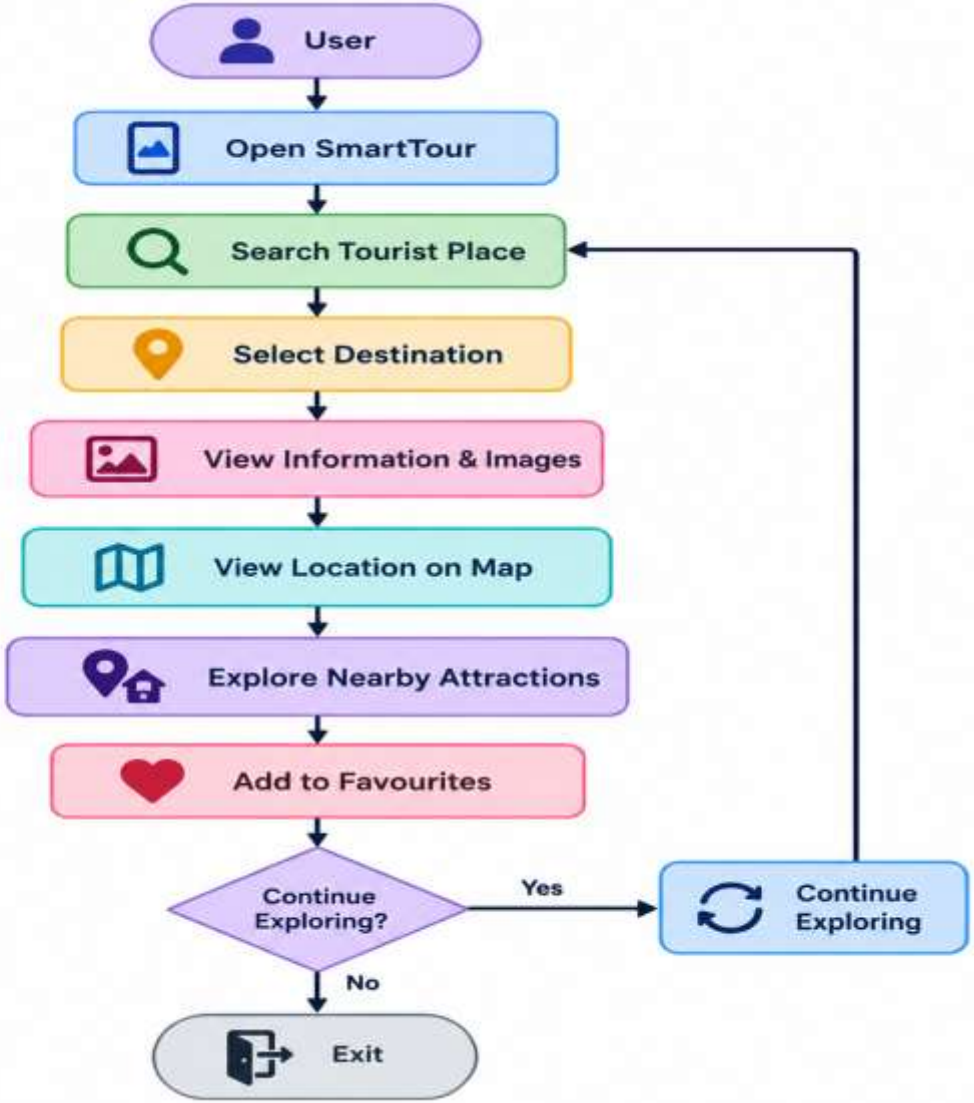

Favourite destinations

Modular and scalable design

Technology Used

Category	Technology
Frontend	HTML, CSS, JavaScript
Backend	Python / Flask
Database	MySQL
Maps & Location	Google Maps API
Data	Structured Tourist Places Dataset
Development Tool	Visual Studio Code
Version Control	Git & GitHub

System Workflow

Main Modules

Destination Search Module

•Allows users to search for tourist places.

•Accepts the name of a place or location.

2. Destination Information Module

•Displays information about the selected destination.

•Includes historical, cultural, and geographical details.

3. Images Module

•Displays images of the selected tourist destination.

•Helps users visualize the destination.

4. Map & Location Module

•Shows the geographical location of the destination.

•Helps users understand where the destination is located.

5. Nearby Attractions Module

•Displays attractions located near the selected destination.

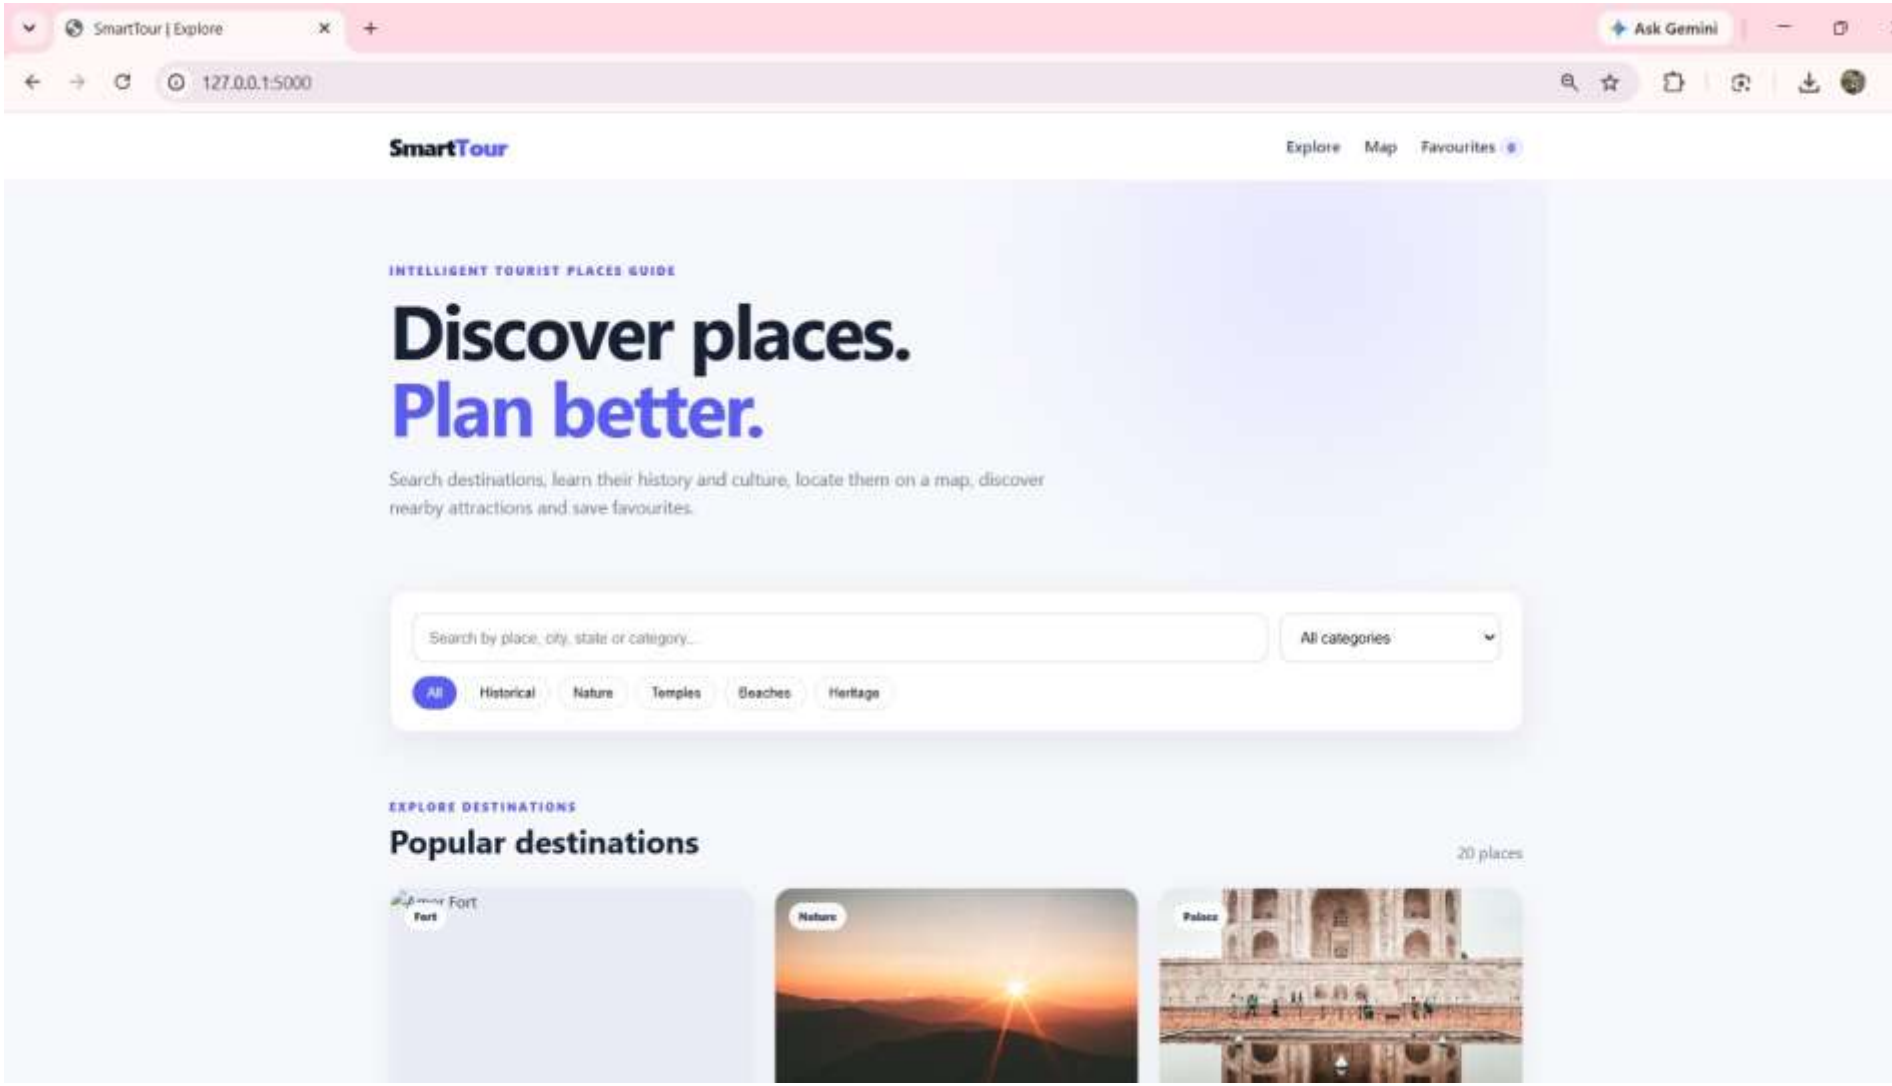

•Helps users explore multiple places in the same region.

6. Favourites Module

•Allows users to save preferred destinations.

•Helps users access frequently visited or preferred places later.

Adaptive Software Engineering Capstone Project

GitHub / Project Progress

Conclusion

SmartTour provides a centralized platform for tourist destination exploration.
The system combines:
•Tourist information
•Destination images
•Location/map support
•Nearby attraction recommendations
•Favourite destinations
The project demonstrates Adaptive Software Engineering principles through a modular, maintainable, and extensible design.
The current system provides a foundation that can be enhanced with additional intelligent travel features.

Future Scope

The system can be enhanced with:
AI-based tourist recommendations
Multilingual language support
Weather forecasting
Hotel booking
Transportation booking
User reviews and ratings
Travel itinerary generation
Offline accessibility
Personalized travel suggestions based on user preferences and browsing history
